

## CONNX STOCK TURNS SAGE 50 IN TO A FULLY FUNCTIONAL WAREHOUSE MANAGEMENT SYSTEM.

If your business has stock and you have been struggling to find a cost-effective solution to add barcode technology to **Sage 50** then ConnX Stock is the answer to your problems.

Using our vast knowledge of barcoding and experience of the shortfalls of stock management in Sage 50, **ConnX Stock** has been developed as an "expansion pack" for Sage 50 to give SME's the functionality that exists in Sage 200 without the price tag.

Utilising mobile devices and barcode label printing **ConnX Stock** gives you control of your stock where it matters - in the warehouse.

### Who can use ConnX Stock?

- Factory stock rooms
- Stores facilities
- Warehouses
- Manufacturing Companies
- Retail shops
- Trade Counters
- Field / Van Sales

You can streamline any operation! ConnX Stock makes inventory management easy.

Feature	Benefit
Quick Setup	Get up and running with ConnX Stock on day one.
Sage50 Integration	ConnX Stock's unique Sage integration method allows you to add barcode stock management without changing your existing Sage50 processes.
Intuitive Interface	ConnX Stock has a similar interface to Sage50 which helps reduce training time.
Barcode Driven	Fast and Accurate data input via any Android or iOS device.
Real Time	Stock figures updated in real time allowing users to see exactly what is picked, received and available.
Order Notifications	Live order notifications for completed receipts and despatches.
Multiple Locations	Store and view stock in multiple locations. Includes multisite options for large warehouse operations.
Consolidated Location Picking	Reduce picking time by collecting all items required from locations at the same time.
<b>Additional modules available for further expansion</b>	
Product Control Module	Manage Serial, Batch and date-controlled products and pick and dispatch using FIFO (First in / First out)
Manufacturing Module	Automatic component picklists created for orders that require stock to be made via Sage BOM.
Courier Module	Full integrated with many existing Courier systems. If your courier Company can provide the data, we will do any development needed to integrate to any not currently available.
Forecasting Module	Set minimum / maximum stock and re-order levels. Calculates using historical sales data to predict required stock holding.
SOP Link Module	Link Sage Purchase Orders to the Sage Sales order it relates to. Receive notification when stock is received and back orders can be completed.
Counter Sales Module	Scan barcodes to build customer orders at the trade counter or order point. Automatically create sales order and invoice without re-entering data.
Mobile Sales Module	Create Sales orders on the road and sell on the go. Perform stock look ups on the fly and see real time data using mobile data.
GS1 Barcode Module	Automatically extract product, batch and date information directly by scanning any GS128 or EAN 128 barcode. Fast entry of batch information straight to your stock records.

What our customers say:

*"The product has enabled us to better control the stock movements both in and out of our warehouse. The installation was handled efficiently, confidently explaining each step required to get everything up and running. Any issues or problems we encountered were quickly sorted out. There was always someone on hand throughout the set up period making sure everything was running smoothly. The program provided is very flexible and has been tailored to our necessary requirements."*
